

Email Archiving Principles

Glossary

- **mailbox** ... user's mail storage area on a mail server, keeps messages in folders, limited size.
- **mail client** ... (Thunderbird, Outlook, etc.) accesses mailbox via IMAP protocol (makes local copy of the mailbox on user's computer).
- **webmail client** ... accesses a mailbox via web browser
- **email archiving** ... systematic approach to saving and protecting the data contained in e-mail messages so it can be accessed quickly at a later date

Good to know

- Users must be aware of the **limited size of their institutional mailbox**.
- **Regular maintaining** of the mailbox **is recommended** (see below for details and hints).
- Users should **make regular backup** of their local archive folder

How to maintain your mailbox

There are several ways to achieve this:

1. unnecessary messages wiping (after deleting empty the recycle bin folder)
2. bigger attachments detaching (sort emails by size and deliberately remove the biggest attachments)
3. move messages to your computer mail folder (archiving to local archive) and make backup of your archive regularly then

Maintenance hints and tips

- check folders size (use webmail for this)
- remember to empty the recycle bin email folder

Email messages archiving

- You can **archive** messages by moving them to **Local folders** in your mail client (Thunderbird)
- **Make** immediately a **fresh copy of the local archive** to a different storage media (external disc, etc.)
- Be aware that your **local archive** is on your computer so its content **is not accessible via webmail**

Archiving hints and tips

- classify messages by durability (assign a folder for temporary messages, mark, tag, etc.)
 - make “preliminary archive” folder inside of server's mailbox, continuously process messages movement
 - move spasmodically (regularly or on demand) messages from the pre-archive to the local archive folders
 - this significantly reduce a need to copy the local archive to the external media
 - the local folders copy on the external disc could be connected and used off-line, kept and distributed
-

Archiving and Shredding rules (examples)

Conditions

- all messages concern any topic older than ...
- all messages with tag “temporary” and older than month
- all messages with attachments from sender XY
- all messages in folder AB since ... till ...
- all messages from last year unprocessed by rules above

Actions

- move to the different folder inside of mailbox (still on server)
- move from the server to the local folder (on local disc)
- clean
