

How to add kyocera printer on MAC

First thing to do is to contact IT department. We have to know your **login username** of your MAC in order to add your account into kyocera server.

The screenshot shows the 'Add Printer' window on a Mac. It has three window control buttons (red, yellow, green) at the top left. Below them are three printer icons, with the middle one (a globe) selected. The main area contains two sections of input fields. The first section has 'Address: myq.cerge-ei.cz' with a subtext 'Valid and complete host name or address.', 'Protocol: Line Printer Daemon - LPD' with a dropdown arrow, and 'Queue: FM' with a subtext 'Leave blank for default queue.'. The second section has 'Name: myq.cerge-ei.cz', 'Location:' (empty), and 'Use: Generic PCL Printer' with a dropdown arrow and a warning subtext: 'The selected printer software isn't from the manufacturer and may not let you use all the features of your printer.'. At the bottom left is a help icon (question mark) and at the bottom right is an 'Add' button.
