

WiFi 'residents' - Windows 7 Howto Guide

Following screenshots will guide you through WiFi setting in Windows 7. Other versions of Windows should work almost the same.

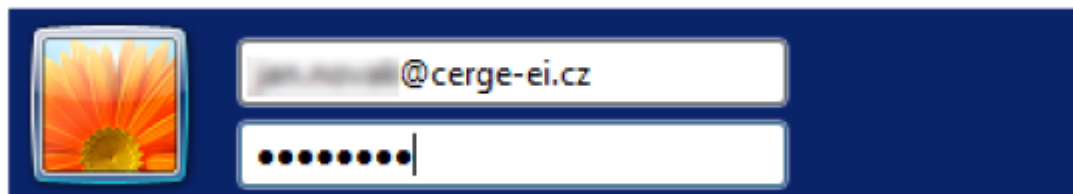

Replace credentials

Saving your credentials allows your computer to connect to the network when you're not logged on (for example, to download updates).

A network connection dialog box with a blue background. On the left is a small icon of a sunflower. To its right are two input fields. The top field contains the text "@cerge-ei.cz". The bottom field contains a series of black dots, representing a password.

☒ **Enable Pairwise Master Key (PMK) caching**

PMK time to live (minutes):

720

Number of entries in PMK cache:

128

☐ **This network uses pre-authentication**

Maximum pre-authentication attempts:

3

Select a location for the 'residents' network

This computer is connected to a network. Windows will automatically apply the correct network settings based on the network's location.

Home network

If all the computers on this network are at your home, and you recognize them, this is a trusted home network. Don't choose this for public places such as coffee shops or airports.

Work network

If all the computers on this network are at your workplace, and you recognize them, this is a trusted work network. Don't choose this for public places such as coffee shops or airports.

Public network

If you don't recognize all the computers on the network (for example, you're in a coffee shop or airport, or you have mobile broadband), this is a public network and is not

Set Network Location

The network location is now **Public**

Network name:

residents

Location type:

Public

To help protect your computer, Windows will limit the discovery of other computers on this network. Network discovery will be limited, and some programs might be unable to connect to other computers on the network.
